Design Basis & Three-Level Scopes

01 • BASIS

资料分层

Tiered basis: the A0 official pre-qualification announcement (2026-05-09) and the agent taskbook; mandatory standard snapshots (MOHURD urban-design measures, regulatory-planning measures, MNR land-use classification); verified public research on heritage, park progress, industry and eight global cases (all in sources.json); a generated layer of concept geometry and metrics inside provisional boundaries.

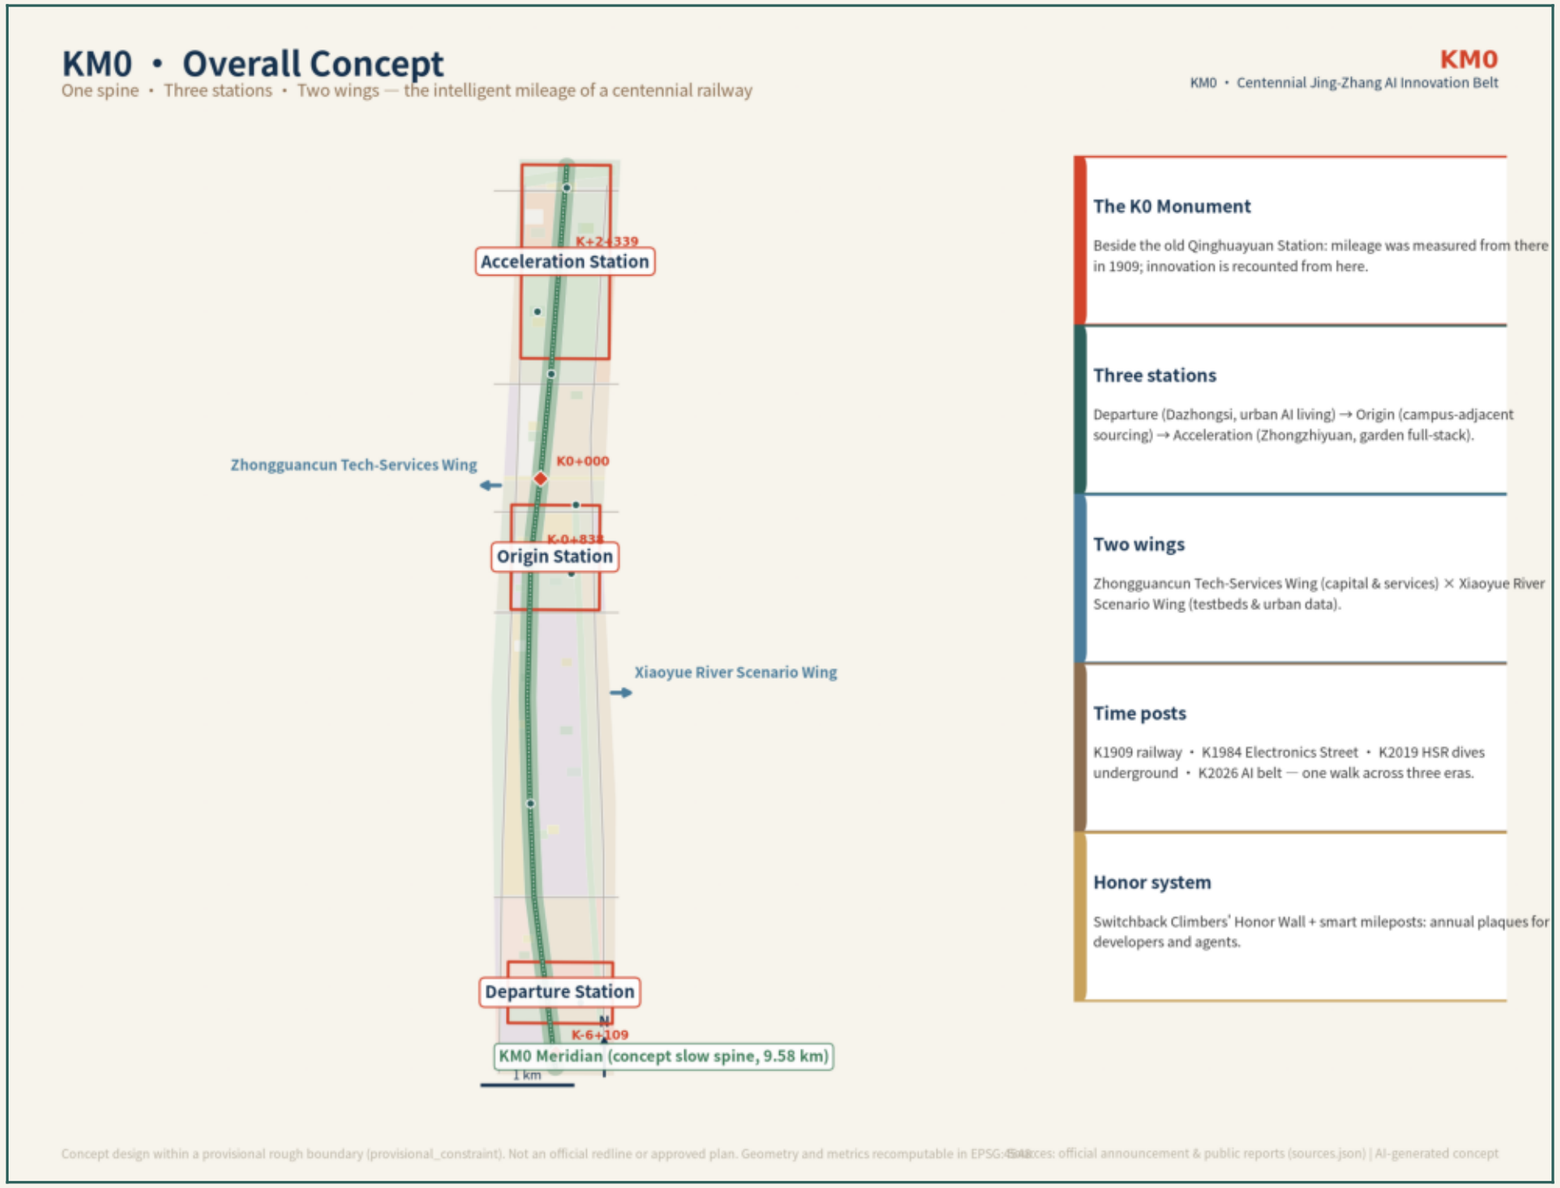

三层范围

CRA ≈43.6 km² (industry strategy) → ODA ≈11.4 km² (regulatory-depth urban design) → KDA ≈368.4 ha (detailed design: Zhongzhiyuan 192.1 / AI Origin 104.3 / Dazhongsi 72.0 ha).

数据边界声明

Official redlines, controls, ownership, utilities and heritage lines are not public; constraints.geojson is deliberately empty; all area metrics are concept recomputations inside the provisional boundary and will be recalculated on official release.

Master Concept: KM0

命名推理

The Jing-Zhang story is about measurement: the 33‰ herringbone climb, the first self-built trunk line, the 2019 HSR dive underground. The fitting tribute is to start counting again — a New Kilometer Zero beside the old Qinghuayuan Station (K0+000).

体系延展

Extensions: the Meridian spine; three stations (Departure/Origin/Acceleration); chainage second addresses (K±km+m); time posts K1909→K2026. Logo direction: a milepost '0' ring crossed by a herringbone zigzag; rail teal / sleeper brown / signal red / steam white.

概念声明

'KM0' is a conceptual brand and monument proposal; it does not claim to relocate the railway's historic origin (Liucun/Xizhimen, pending authoritative confirmation).

Industry Research & Global Evidence

03 • INDUSTRY

海淀底数

Haidian core AI industry: RMB 282.2B (2024), reportedly >350B in 2026 (~30% national); 1,900+ AI firms (~80% of Beijing); ~130 filed foundation models; ~12,300 AI scholars. AI is the apex of the '1+X+1' system.

八案例五机制

Eight cases — Kendall Square, Station F, one-north/Punggol, Eindhoven, Mila, Pittsburgh, King's Cross, Tel Aviv/Yozma — converge on five mechanisms: heritage containers × anchor institutions × patient capital × alliance governance × open scenarios.

未来城市形态判断

Future-form thesis: conditional morphology (height as a function of official controls, recomputed on data arrival); space as a service (long-term holding + graded leasing + open scenarios); public legitimacy first (data governance before sensors).

Spatial Structure & Land Use

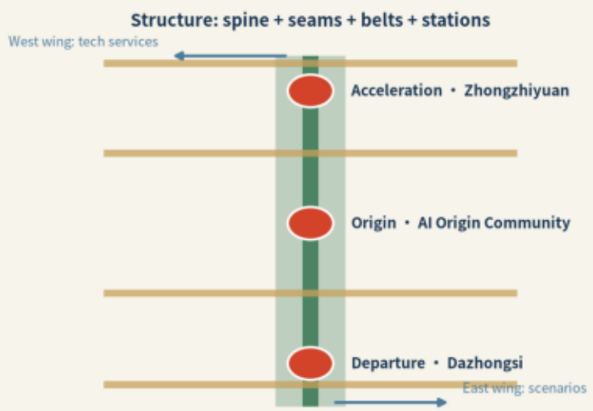

04 • STRUCTURE

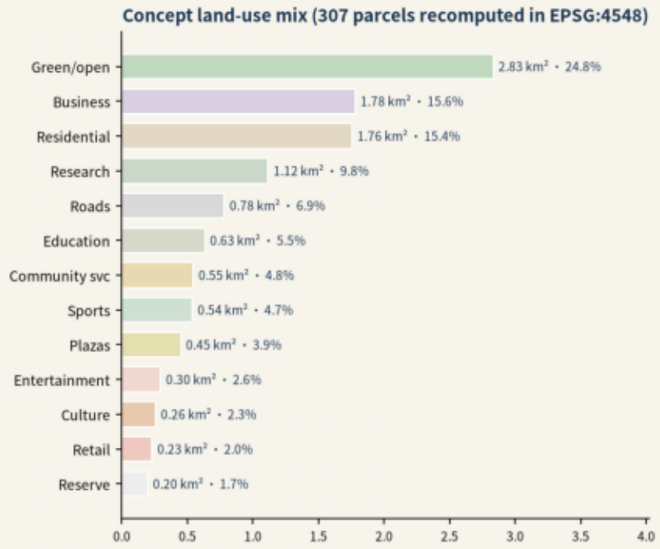

Three-Level Scopes & Land-Use Structure

From the 43.6 km² research area to the 11.4 km² design area to the 368.4 ha key areas

KM0 • Centennial Jing-Zhang AI Innovation Belt

Concept design within a provisional rough boundary (provisional_constraint). Not an official redline or approved plan. Geometry and metrics recomputable in EPSG:4548. Sources: official announcement & public reports (sources.json) | AI-generated concept

一轴四缝两带三站

The 9.58 km Meridian runs north–south; four east–west seams re-stitch the railway cut; the Xiaoyue and Qing rivers form the blue-green base; three stations carry the key areas.

用地概念构成

Concept mix: green/open 24.8%, business/retail ≈18%, residential/community ≈20%, research/education ≈15%, roads 6.9%, plazas/sports 8.7%, strategic reserve 1.7% (307 parcels, recomputed).

留白制度设计

Two strategic reserve plots (5th-Ring gateway, mid-corridor) keep room for unforeseeable national platforms and new-economy species.

Slow Mobility × Blue-Green Space

05 • MOBILITY & BGS

KM0

慢行骨架

9.58 km spine + four ~5.0 km seams → a ≈14.6 km concept slow network; breakpoints become chainage nodes.

站点一体化（概念）

Dazhongsi four-quadrant pedestrian demonstration (L12/13); Wudaokou–Qinghua East dual-station interface; Qinghe HSR north gateway. Engineering remains with official studies.

诚实声明

existing_condition corridors in roads.geojson are inferred from public map knowledge (confidence=low) — not redlines.

Key Area: Acceleration • Zhongzhiyuan

06 • KEY AREAS

Positioning & Stations

Three Stations • Key-Area Concept Designs

Positioning + structure + renewal + mobility + public space + scenarios + risks (directional concepts on provisional geometry)

KM0

KM0 • Centennial Jing-Zhang AI Innovation Belt

Acceleration Station • Zhongzhiyuan

Garden-type full-stack AI district (announced ≈192.1 ha): green-valley + courtyard skeleton; embodied-AI outdoor test field (SC-10); digital-twin proving ground (SC-08); strategic reserve for national platforms; Xuezhiyuan micro-centre and Qinghe hub links; Qing River waterfront narrative. Risks: inventory unpublished; garden-scale vs industry-scale tension awaits regulatory deepening.

Design moves

- Garden valley + full-stack R&D courtyards
- Embodied-AI outdoor test field SC-10
- Xuezhiyuan micro-centre • Qinghe hub link
- Reserve land for national platforms

Origin Station • AI Origin Community

Design moves

- K0 monument + open-source release gallery
- Wall-less campus interface • low-disturbance renewal
- Wudaokou / Qinghua East dual-station integration
- Enterprise copilot • talent living rooms

Departure Station • Dazhongsi

Design moves

- Zhihui Plaza + four-quadrant pedestrian links
- AI-native consumption field SC-02/09
- Line 12/13 interchange connection
- Juesheng Temple heritage × data sandbox

Concept design within a provisional rough boundary (provisional_constraint). Not an official redline or approved plan. Geometry and metrics recomputable in EPSG:4548. Sources: official announcement & public reports (sources.json) | AI-generated concept

Key Area: Origin • AI Origin Community

KM0

Positioning & moves

Campus-adjacent innovation district (announced ≈104.3 ha): K0 monument & Origin Square, open-source release gallery, talent living rooms; low-disturbance organic renewal; Wudaokou / Qinghua East dual-station integration; growing on 400+ existing firms (~74% AI). Risks: complex ownership; guard against gentrification.

Key Area: Departure • Dazhongsi

KM0

Positioning & moves

Urban-type AI industry cluster (announced ≈72.0 ha): Zhihui Plaza + four-quadrant pedestrian links; AI-native consumption field & data-element sandbox (SC-02/09); public-realm upgrades around the ByteDance cluster; Juesheng Temple (1733, Yongle Bell, national monument) as cultural anchor — no construction imagined inside protection boundaries. Risks: station engineering/ownership; respect incumbents.

AI Scenario Cards & Personas

07 • SCENARIOS

十二张场景卡

Twelve cards: heritage guide, robot delivery, shuttle experience, walkability audit, enterprise copilot, health navigation, event-safety review, digital-twin ground, data sandbox, embodied-AI testing, open-source gallery, riverside camp. Each carries chainage, data boundary, human review and operator type; five are industrial test-validation scenarios.

六类画像

Six personas from PhD contributor to resident to global pilgrim. Privacy floor: public image capture only where safety-necessary with signage; non-face-recognition alternatives retained; generated content always labelled.

工程推导示例

Worked derivation: SC-02 passing bays from the 1.5 m wheelchair turning diameter (code-referenced) + braking distance and reaction time (derived) → ~30–40 m spacing, ⩾1.8 m clear width (self-assumed, to be calibrated) — four-level source grading.

Renewal Projects, Phasing & Operations

08 • IMPLEMENTATION

十二项更新项目

Twelve projects from greenway completion to the twin substrate — each with dependencies and implementer type; all conceptual.

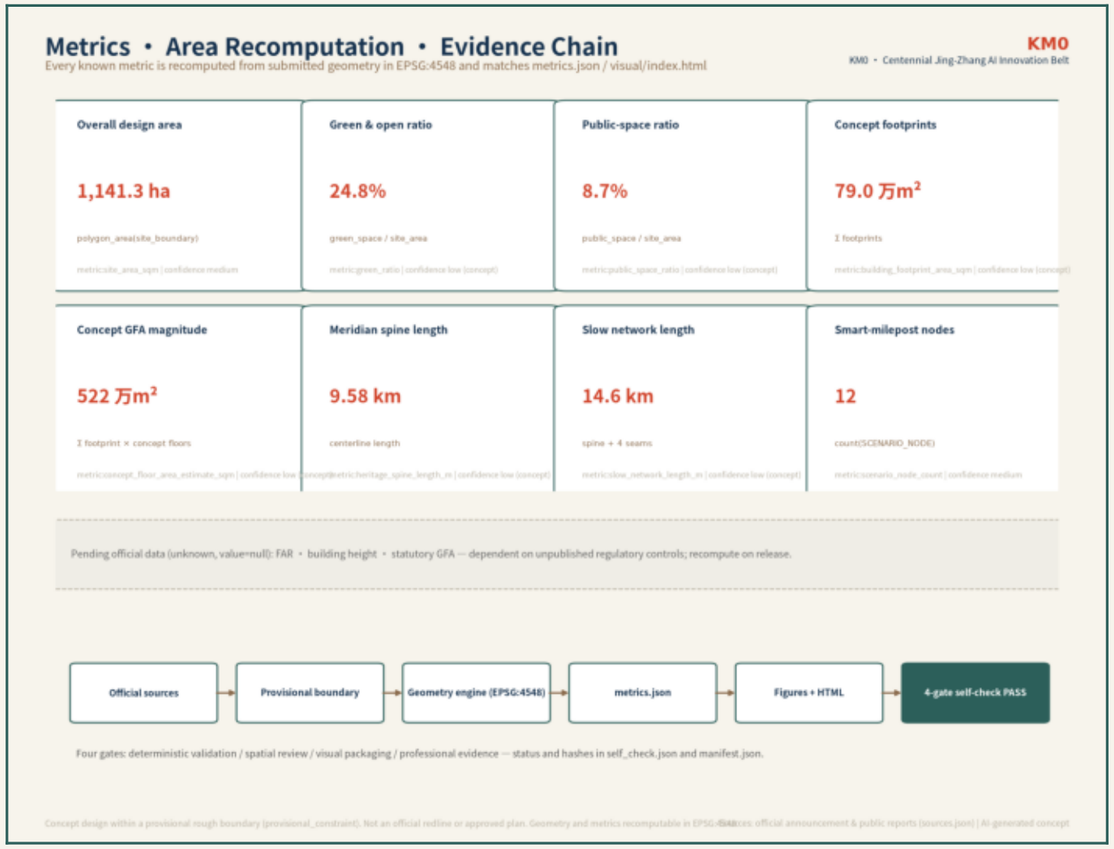

三期分期

Phase 1 demonstration ≈327.6 ha (28.7%) → Phase 2 two cores ≈384.1 ha (33.7%) → Phase 3 belt-wide darning ≈429.6 ha (37.6%); triggers and exits per phase; no government commitment implied.

年度活动与运营

Seasonal calendar (KM0 Conference with ZGC Forum; Track-Laying hackathon; Open-Source Harvest with plaque unveiling; winter light season); a five-party KM0 Council; a four-step scenario pipeline; two order-of-magnitude unit-economics sketches; an FMEA failure-mode library.

Metrics, Compliance, Risk & Rights

可复算纪律

All known metrics recompute from submitted geometry in EPSG:4548 and match metrics.json / visual/index.html; FAR, height and statutory GFA remain unknown with recalculation triggers.

合规覆盖

17 announcement tasks + 6 agent tasks mapped; 5 mandatory + 4 reference standards answered; 15/15 design-depth items complete.

风险与版权

Eight-dimension risk self-assessment (risk.json) with mitigation and human review; AI-generation responsibility, cleared fonts/assets, COMMUNITY-DISPLAY-ONLY licence (report/copyright_statement.md).
